Speech analysis and Archive research

Meta Forum 2012, Brussels

George Wright
Head of Internet Research & Future Services
BBC R&D

@georgie
Around 70,000 radio programmes
- Covering +60 years
- ~ 3 years of continuous audio
- Sparse metadata
- ~ 500 TB of content
The Content by genre

- Arts and Drama: 26.7%
- Business and Finance: 9.8%
- Entertainment: 5.6%
- Faith and Values: 26.9%
- Learning: 6.9%
- Music: 14.9%
- News & Current Affairs: 3.1%
- People and Places: 3.1%
- Science and Health: 3.1%
- Sport: 3.1%
The Content (Corpus)

All the BBC World Service's English language output

Plays, features, documentaries going back 60 years

Uncompressed WAVs and high quality MP3s

Rights cleared for worldwide use
Why we have to use language tools

• Impossible to re-categorise

• Some of this content very specialised domains

• Need to identify links within programmes, and to the web

• Ongoing growing archive

• Constant pressure to spend more money on programmes, less on programme 'management'
Why it's interesting and useful

• Experimenting with a massive dataset

• Researching complex GUIs, worldwide content, interesting journeys

• Useful for other BBC content areas

• Useful for other domains
Why this is hard

• Lack of publicly available acoustic and language models for speech recognition.
• Most available acoustic models and language models (often under no clear licensing because derived from commercial datasets) are trained on US English, with US speakers.
• Real need for a good, open-source, British English acoustic model
• Need for good open language models for a variety of domains.
• World Service English unique!
Processing the World Service archive

- Workflow steps isolated in individual workers
- Computation-intensive workers on Amazon Web Services
- All managed by Message Queues and an API centralising the data
- Only bottleneck: upload speed to Amazon's servers

Speech recognition tools

- Using CMU Sphinx
- HUB4 acoustic model
- Language model derived from the Gigaword corpus
- Word Error Rate of about 47%
In action

BBC World Drama

Washington Nine Eleven

Synopsis
A drama telling how US President Bush and Vice President Cheney responded in the first few hours after the 9/11 attacks.

Peer reviewed outputs

- Two papers at World Wide Web conference, April 2012
- One paper at Extended Semantic Web Conference, May 2012
- Two posters and one paper at IBC, 2012
Critical issues

• Currently around 40% accuracy

• Needs to get better at understanding complex vocab, unusual language

• Reaching limit of existing state of the art

• Embedding best-of-breed academics with team

• Plan for public trial

• Speech rec needs more help!
