

LT-OBSERVATORY

LT_Observatory is a CSA with 5 core objectives:

- ✓ Identification of language resources in existing pools and in other national resources based on pre-identified user needs.
- ✓ Make these Language Resources practically usable through offering different entry points and proposing criteria and methodologies for their benchmarking and qualitative improvement.
- ✓ Identify national language strategies and policies as well as national/regional funding sources and European Structural and Investment Funds to realise the multilingual Digital Single Market.
- ✓ Bring together different stakeholders from the language community, to define a practical MT deployment roadmap for the future of Europe's multilingual landscape.
- ✓ Create the on-line LT Observatory as a sustainable infrastructure for access to the "LT ecosystem" tools and resources.
